

Highlights

- Quickly discover and extract data from structured and unstructured documents
 - Speed up interpretation by delivering extracted data in an analysis-ready format
 - Effectively communicate findings with intuitive visual charts
 - Populate iBase databases with newly discovered information
-

IBM i2 Text Chart

User-controlled text extraction and visualization of unstructured data

IBM® i2® Text Chart is a user-controlled application designed to streamline the process of extracting and visualizing data from text documents. With this intuitive tool, free text is quickly transformed into a structured graphical format that is ready to be analyzed and shared. Since Text Chart visualizations are compatible with IBM® i2® Analyst's Notebook® and IBM® i2® iBase, the resulting structured information can be shared with other members of the intelligence community.

This application improves analytical efficiency by delivering the entities and relationships extracted from text sources in an analysis-ready format, dramatically reducing the time it takes to create and share intelligence. As well as helping to discover and pull information from a variety of documents, Text Chart, when paired with iBase, allows central database records to be populated while creating visualizations.

Text Chart can deliver immediate productivity gains by extracting intelligence from volumes of unstructured text data, helping users uncover relationships and patterns faster.

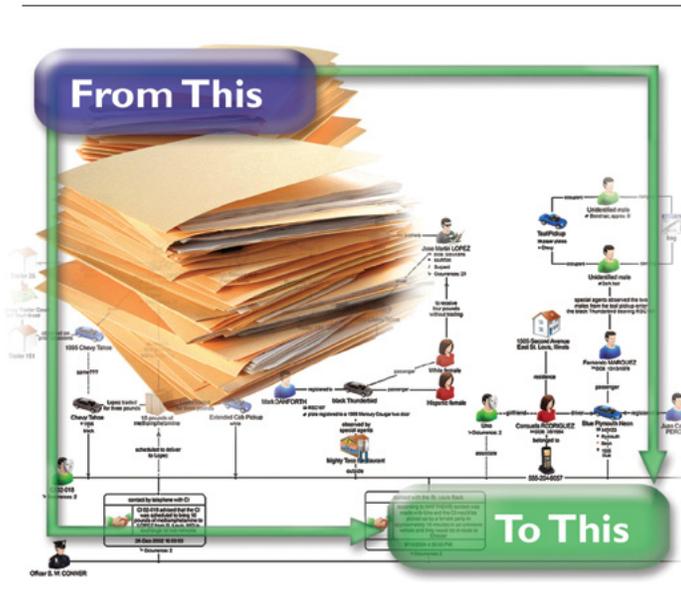

Figure 1: Create intuitive visual representation from a mass of written reports

Improve the efficiency and accuracy of text extraction

Text Chart helps users speed up the process of extracting analysis-ready data from original source documents, helping to eliminate the need to convert formats such as text, HTML, PDF and Microsoft Word. Users can also reduce time spent on repetitive entities of interest searches with the help of user-defined target lists that leverage powerful fuzzy search technologies.

Generate analysis ready charts

After using Text Chart to extract data, users can then quickly create charts for further analysis in Analyst's Notebook. This accelerates the analytical process and reduces errors by populating searchable charts and databases without users having to re-key information.

Uncover and share critical intelligence

Use Text Chart to find and discover key information hidden in unstructured text documents that could otherwise go unnoticed. This vital information can be quickly populated into iBase databases so that it is available to the broader team, not only increasing the value of intelligence but also empowering informed decision making across the organization.

Increase productivity and share intelligence faster

Without Text Chart, valuable information hidden in these unstructured documents could go unnoticed. With the help of Text Chart, users are more likely to find and discover critical information which increases the value of their intelligence. In addition, users can quickly populate iBase databases with the returned information, making it available to the broader team and empowering informed decisions across the organization.

Figure 2: Quickly discover relationships within multiple documents and identify missing or erroneous details

Text Chart key features:

- Convert unstructured text into analysis ready data, removing the need to re-key information.
- Mark-up and extract data from common file formats (Plain Text, Rich Text, HTML, PDF, Microsoft Word, Excel, WordPerfect and OpenOffice/StarOffice).
- Discover hidden connections between multiple source documents, so that valuable information is not overlooked.
- Search for specific text or identical and similar entities in documents using synonym, sounds-like and spelled-like search capabilities.
- Create charts and update database records from a single intuitive workspace with options and design templates suited to your analysis.
- Compatible with other IBM i2 solutions to support the comprehensive intelligence cycle.
